

Analysis of ESR of CZ coordinators in KBBE

Nada Konickova | Technology Centre ASCR, CZ

Maria João Fernandes | GPPQ/FCT, PT

- **15 project proposals submitted by Czech coordinators (2 coordination actions, 13 collaborative projects)**
- **4 projects above the threshold**
- **Only 2 successful coordinators**

BUT

CZ has 73 participants in 65 projects

CZ participants success rate in KBBE is 22,3 %

CZ participants financial success rate in KBBE is 19%

Projects distribution according marks

S/T excellence

• Frequent weak points

- Insufficient description of the state of the art or the proposal proposal does not go beyond the state of the art
- Some actions proposed are already well established at a scientific or technical level
- Methodology and workplans are not sufficiently detailed
- Deliverables and milestones are mostly reports
- Objectives of WPs not clearly defined, interdependency of WPs is not shown
- Results not achievable during project duration
- Risk and contingency plan underestimate some challenges

Management

- **weak points**

- Management procedures concentrated only to one partner, predomination of the coordinator
- Consortium is of moderate size (6 partners from 4 countries)
- Management structure presented in a very general way
- Roles and tasks in consortium unbalanced, symbolic participation with limited resources
- Unsuufficient background information for some partners
- Partners with specific expertise missing

Impact

- **Weak points**

- Expected impact not very concrete
- Proposal only partly reflects expected impact listed in the call topic
- Dissemination only through manuscripts and one workshop – inadequate to reach the target community
- IPR issues should be addressed more fully
- Trainings planned only in the country of coordinator
- Target groups for dissemination only generally described
- Dissemination process poorly described, value for money is not clear
- The restricted access to key project outputs will somewhat limit the impact

Thank you
